The project

OUT-DOOR – Blended Outdoor Learning is an Erasmus+ project, created for fostering the employability of newly graduates.

This project, coordinated by the Lodz University of Technology, brings together the efforts of 6 entities from 5 EU countries, with the aim of promoting a shift in the educational paradigm.

These organisations are: Lodz University of Technology (Poland), the University of Vigo (Spain), the Kaunas University of Technology (Lithuania), the University of Azores (Portugal), the University of Salento (Italy) and FEMXA (Spain).

2° Transnational Project Meeting

The **second face-to-face meeting** of the TPM project was held at the **University of Vigo** from **3 to 5 September 2024**. All project partners sent delegations to attend the meeting, which were received by the Vice-Rector for Research, Professor Belén Rubio.

During the meeting, the contents of the modules for the e-learning course were discussed, reviewing their progress and quality. Participants made a detailed analysis of the progress so far, highlighting achievements and areas for improvement. Next steps were discussed, setting clear objectives and strategies for further development of the project.

In summary, the second face-to-face meeting of the TPM project in Vigo was a resounding success, strengthening the collaboration between the partners and making significant progress in the development of the project activities.

Outdoor testing

One of the highlights of the meeting was the presentation of the **PENEIRA application** designed by CESGA (Centro de Supercomputación de Galicia). This innovative tool is designed to monitor the activity of the students during the proposed outdoor activities.

The application was tested by the partners during a test day in the Cíes Islands, part of the National Park of the Atlantic Islands of Galicia.

In this activity, the project partners were able to test the usefulness of the application and explore the opportunities provided by outdoor learning. The PENEIRA application proved to be an effective tool to monitor and evaluate students' performance in real time, providing valuable data to improve the quality of outdoor education.
